9. Iı	n regular pentagon $ABCDE$ , diagonals $\overline{AC}$ an	$\overline{AD}$ meet diagonal $\overline{BD}$ at points $X$	and

Y, respectively. Given that AB = 1, what is the length of  $\overline{XY}$ ? Express your answer as a common fraction in simplest radical form. [We found many of the angles in the diagram last

week, and these will be helpful for finding isosceles triangles and similar triangles.]

your answer as a common fraction.

10. Tosh rolls two standard six-sided dice while Brant rolls one standard six-sided die. What is the probability that the larger of Tosh's rolls is (strictly) greater than Brant's roll? Express

- 1.
- 2.
